Product Description Forge adjustable recirculation valve (Civic 2015+ Type R)

Description

Forge Motorsport direct replacement recirculation valve for the Honda Civic Type R 2015. This hand polished valve bolts directly to the turbo in place of the OEM diaphragm type valve.

Built in the UK, it features a robust piston design that allows for tuning with interchangeable springs.

For those running higher boost pressures after software tuning, this really is a must to ensure that you do not lose boost through the valve.

In The Box:

- 1 x FMDV5R Valve
- 1 x Upgraded Yellow Spring
- 3 x M6 x 16 Hex Head Bolts
- 1 x Forge Sticker

Applicable to:

- Civic 2015+ Type R FK2
