Product Description HAMP Synergy oil filter (All Honda's 88-12)

Description

Introducing Japan Honda's aftermarket line of automotive products..."HAMP Synergy". HAMP Synergy are aftermarket products designed by Honda and are a step up from the "Honda Original Parts" products.

Not meant to compete with racing products, however, these pieces are quality. The HAMP oil filter can be used on any Honda, but was specifically designed for use in the Type-R and S series cars in mind.

Features include a unique release valve that dynamically adjusts to the conditions within the filter to keep the oil flow and pressure constant. The HAMP oil filter will last longer and filter better than any of the oil filters currently on the market.

Please note: The latest filters from HAMP are Blue instead of Green. The quality is still exactly the same.

Applicable:

-Universal Honda
